

ABRA — the tag master

Generated by `build/gen_tags_master.js` from `data/tags.json` and the live corpus. Do not edit this file — regenerate it. Every count is measured at generation time over the **69,828** team-sheet entries in the clean corpus.

This replaces the five separate review documents that had accumulated. There is one now.

Decisions already made

`profitsFromHit` **is split — done.** It was covering two mechanics that imply *opposite* decisions, and the difference is whether the effect compounds.

tag	what happens	compounds?	what the bot should do
<code>buffsHolderOnHit</code>	Stamina +1 Def, Justified +1 Atk, Electromorphosis banks Charge	Yes — every hit makes the next worse	stop hitting it, or kill it this turn
<code>punishesAttacker</code>	Rough Skin chip, Static / Flame Body / Poison Point status, Cursed Body disable	No — a flat toll each time	keep hitting it, just not with contact

This is the Bellibolt turn: Discharge into Archaludon was resisted **and** fed it a free Stamina boost — the first row. Against a Rough Skin body the same click is fine.

One correction to what was proposed. Weak Armor and Gooley were predicted to carry both tags; the derivation says otherwise. Weak Armor only ever touches itself and Gooley only the attacker, so **nothing that anyone actually brings carries both** — Perish Body does, and it is on zero sheets.

MEGA ABILITIES — the sheet does not say what will be on the field

19,575 sheet entries (28.0%) hold a mega stone, and **90.2%** of those would change ability on evolution — **17,662** entries, about one Pokémon in four.

Every ability count in this document is the ability *written on the sheet*. Staraptor is the case to hold in mind: it enters with **Intimidate**, which fires immediately, and becomes **Contrary** only if it is the one Pokémon that evolves — and Contrary inverts every stat change.

Two things are true at once, and the corpus settles which matters when.

The base ability is live from switch-in until the instant of evolution — Staraptor’s Intimidate fires on entry and lands its drop *before* it can become Contrary. But the mega ability is what most of the battle is played against, because the choice is already made at team preview:

mega stones	held on the sheet	actually brought
one	31.9%	85.7%
two	67.2%	9.4%

Teams *hold* two and *bring* one. Of teams bringing any stone, **90.1%** bring exactly one, and a stone-holder on the sheet reaches the battle only **62.2%** of the time. So a stone-holder on the field is nearly always the sole candidate — its base ability is real but brief, and the right-hand column below is close to what the engine actually faces.

ability	on entry (brief)	after it megas	swing

The mega abilities, with their tags — for review

These reach the field only after evolution, so they carry little or no sheet usage and are **absent from the ability tables below**. `untagged` here means genuinely no mechanic; *not in the tag table* means the ability never appeared on a sheet, so nothing tagged it — which is exactly the hole this section exists to close.

ability	reaches the field	on sheets	tags
Adaptability	3,176	2,997	<code>stabBoost</code>

Shadow Tag is the one to look at first: 446 fields, zero sheets, and it prevents switching outright. **Fairy Aura** is the largest at 1,455. **Contrary** at 2,091 inverts every stat change, which turns a debuff into a buff and makes Intimidate a gift.

MOVES — every move, in usage order

This is the review list. Read down it and check that each move's tags describe what it does.

Every move that appears on a real sheet, in usage order, with the tags it carries. `untagged` is deliberate — it means the thing genuinely has no mechanic, like Hydro Pump.

CROSS-REFERENCE — the same data grouped by tag

Kept because once a tag looks wrong, this is the fast way to see everything it caught. It is not the review list: a move with a MISSING tag cannot appear here, since it is absent from the very group it belongs in. That is how Clanging Scales and Super Fang stayed hidden.

Moves by tag

Every move tag with its members, ordered by how much of the format it covers.

`read` means a probe string for the tag appears in `board.js` or the damage engine. **NOT READ** means the tag is correct and nothing consumes it yet — a wiring backlog, not an error.

`statusCategory` — **153.9%, 175 moves**

category is Status: Prankster +1, blanked by Taunt, illegal under Assault Vest

Abilities by tag

Every ability tag with its members, ordered by how much of the format it covers.

read means a probe string for the tag appears in `board.js` or the damage engine. **NOT READ** means the tag is correct and nothing consumes it yet — a wiring backlog, not an error.

terrain := WHICH on switch-in

abilite	on sheets	share
Psychic Surge	1	0.0%

4 more carry this tag but appear on no sheet in the corpus.

`boostsOnKO` — **0.0%, 2 abilities — NOT READ**

highest stat +1 every time it takes something down

Legal in the format, never brought.

`privateWeather` — **0.0%, 1 abilities — NOT READ**

the HOLDER moves resolve as if a weather were up, while the field says none

Legal in the format, never brought.

`preventsSwitch` — **0.0%, 3 abilities — NOT READ**

the target cannot switch out -- its escape option is deleted

Legal in the format, never brought.

`auraBoost` — **0.0%, 2 abilities — NOT READ**

multiplies one TYPE for every Pokemon on the field, friend and foe

Legal in the format, never brought.

`hitsTwice` — **0.0%, 1 abilities — NOT READ**

every damaging move strikes twice, the second at quarter damage

Legal in the format, never brought.

Items by tag

Every item tag with its members, ordered by how much of the format it covers.

`read` means a probe string for the tag appears in `board.js` or the damage engine. **NOT READ** means the tag is correct and nothing consumes it yet — a wiring backlog, not an error.

`megaStone` — **28.0%, 75 items**

the holder becomes another species

Review log

What each review pass changed. Every entry names the mechanic so a later run can re-check it.

Moves review — 2026-07-28/29

Six findings, all cases where the engine could not see a mechanic at all.

1. Clanging Scales. Three separate dex fields carry self stat changes and the probes read two. `self.boosts` (Close Combat) and `secondaries[].self.boosts` (Ancient Power) were covered; `selfBoost.boosts` was not, and that is where Clanging Scales keeps its Defense drop. A 110 BP spread move with an invisible drawback.

Now tagged `lowersUser`.

2. HP-gated moves. Substitute (247 uses) costs 1/4, Clangorous Soul (190) costs 1/3, Shed Tail (41) costs 1/2 — and all three *fail outright* below that. Neither cost nor failure was modelled. The failure inherits the simultaneity problem: you can have the HP when you choose and not when you act, because their attack resolves first.

3. Per-hit accuracy. Triple Axel rolls each hit separately, so it lands all three **73%** of the time, not 90%. Population Bomb lands all ten **35%**. Dual Wingbeat and Bullet Seed roll once for the whole move. Applying accuracy once overstated the multi-accuracy ones.

4. Moves that read the target's item. Knock Off is $\times 1.5$ into an item (1,663 uses) and Poltergeist fails without one (183). Mega stones do **not** dodge Poltergeist — a stone is an item and the move reads `target.item`. What stones resist is *removal*: Knock Off and Trick fail to take them, and only from the matching species. Poltergeist is near-unconditional here anyway — **106 of 65,976** sheet entries hold no item.

5. Fixed-damage moves — the worst of the set. Super Fang, Final Gambit, Endeavor, the OHKO moves and Night Shade all have base power **0** and compute damage in a callback. The engine did not misprice them, it read them as dealing **nothing at all**. 764 uses. Super Fang halves your HP and the bot thought it was harmless.

6. The placeholder rule. Anything untagged now carries an explicit `untagged` marker rather than an empty list, and is *flagged* only above 0.5% of sheets. Your call: "im not trying to plan for watchog man... just have it flag it if it becomes a problem." Every move, ability and item above that floor currently carries at least one tag.

Loose ends answered: Icicle Crash flinch is **30%**. Imprison does emit a `|-start|` volatile, which `board.js` now tracks with a turn timer. Charge is *not* like Stockpile — Charge is one-shot and consumed by the next Electric move; Stockpile stacks to 3. They share the shape of a banked resource sitting in a volatile, which is why neither was visible before volatiles were tracked.

Where this stands

	count
tags total	175
— move / ability / item	96 / 56 / 19
moves tagged	500
abilities tagged	258
items tagged	146
tags read by nothing	105
tags that match no member at all	7

105 of 175 tags are read by nothing yet. The taxonomy is ahead of the consumer, deliberately — you are reviewing before it gets wired. But that gap is the risk: this repository has a history of models fitted, saved, quoted, and never once used in a live decision. A tag that nothing reads is that same failure wearing a new hat.

So the next work is not more tags. It is `tags.json` feeding the damage distribution in **MAGNEMITE**, and `tests/test-wiring.js` proving each one ran inside a real game.
