

ITEMS — the review list

Generated by `build/gen_items_doc.js`. Do not edit — regenerate. Counts are measured at build time over the **65,976** team-sheet entries in the clean corpus.

Mega stones are excluded — 18,475 held items, 28% of the total, carrying one tag between them. They were pure noise here; what they actually change is the *ability*, which lives in the MEGA ABILITIES section of the master document. Dropped by the `megaStone` dex field, not by name.

That leaves **65** distinct items across **47,395** holders.

`untagged` is deliberate — it means the item genuinely has no mechanic worth modelling.

item	on sheets	share	tags	parameters
Focus Sash	7,693	16.2%	<code>survivesFromFull</code>	<code>survives:true</code>
Sitrus Berry	7,132	15.0%	<code>healsAtThreshold</code>	<code>triggersBelow:1/2, restores:1/4, confusesIfWrongNature:null</code>

Leppa Berry	1	0.0%	untagged	

What changed in this pass

Sitrus Berry — the tag named the *trigger* and not the amount. It fires at **1/2** HP and restores **1/4**, which are two different numbers the kill calculation needs separately: a target at 55% is not in range of what looks lethal.

Life Orb — recorded $\times 1.3$ and not the **1/10 max HP it costs on every attack**, so the item read as free. Its membership was also a name hardcode (`/^(lifeorb)$/`); both now come from the handlers.

Type-boost items were a 24-name regex — `charcoal|blackglasses|mysticwater|...` — which silently omits anything it forgot. Now derived from the handler, which names both the type and the factor: **18 items** on sheets, each with its own type, all at $\times 1.2$.

Focus Sash and Sturdy already shared `survivesFromFull`, item and ability under one tag — that linkage was correct before this pass.

Leftovers and Leech Seed now share `perTurnHP`: $+1/16$ to the holder against $-1/8$ moved from the target to the user. Leech Seed had only `statusCategory`, so its drain was recorded nowhere.

Figy Berry is on **o sheets** and is correctly absent — the 0.5% floor doing its job.
