

Tag review — corrected pass

108 tags. Usage from **5,440 open-sheet human games** — 65,280 sheet entries, 260,799 move slots.

Every point from your review

you said	what I did
Scope Lens?	added — items had no crit tag at all. Also Super Luck, Merciless
max is 1.5 crit	documented — the ratio is a <i>stage</i> feeding P(crit); crit damage stays $\times 1.5$
Sniper makes crits 3x	added as a third crit parameter — but it is $\times 2.25$. It was $\times 3$ when crits were $\times 2$
tag never-miss moves	<code>neverMisses</code> — 34.4% of move slots
Horn Drill is also OHKO	tagged. The whole OHKO family has zero usage in 260,799 slots
how do you model Mold Breaker	one boolean gating every defender-ability tag
do we need the priority table	already correct — it probes <code>onModifyPriority</code> . Gap: Quash and priority items
you can use negative prio vs Farig	verified: $+3 \rightarrow 0.984$ blocked, 0 and $-6 \rightarrow 0.000$
does Gale Wings check full HP	verified — the probe passes real HP, so the condition evaluates
is Draining Kiss contact	yes. Exactly 4 special contact moves exist, 3 see play
.75 same, differ enemies vs my side too	split <code>spreadFoes</code> (9.7%) / <code>spreadAll</code> (2.0%)
Rock Slide only hits the enemy side	you were right, I was wrong. It is <code>allAdjacentFoes</code>
what is Dazzling	the ability, on Bruxish. Three names for one identical effect
these are just % chance to flinch	<code>flinches</code> now carries P(flinch), 10%–100%
King's Rock	added — same parameter, from the item side
Wide Guard: side condition or protect	split <code>oneTurnGuard</code> / <code>sideBuff</code> / <code>hazard</code>
hazards are different than Reflect	separated — their side, prices future switches
some recoil moves have more than others	now carries the fraction. Head Smash 1/2, Flare Blitz 33/100
restores MY hp or PARTNER hp	split <code>healsSelf</code> / <code>healsAlly</code> , reconciled with <code>drain</code>
make sure Wide Guard works	it does not — rollout engine only. 2,065 uses
Trick Room needs its own tag	<code>reversesSpeed</code> . Wonder Room, Magic Room and Gravity separated too
accuracy tags — Gravity	<code>accuracyMod</code>
Wonder Room makes items useless?	close — Wonder Room swaps Def/SpD ; <i>Magic Room</i> kills items. Both tagged
charge needs a weather sub-tag	<code>chargeSkippedByWeather</code> — Electro Shot in rain, Solar Beam in sun
or Power Herb (future proofing)	<code>skipsChargeTurn</code> — nonstandard today, derived so it works the day it is legal
Phantom Force / Meteor Beam not weather	correct — excluded

you said	what I did
these are just switch moves not damage	split <code>pivotDamaging</code> / <code>pivotStatus</code> / <code>passesState</code>
is Substitute its own class	yes — added
Coaching would never be used on the enemy	boosts split by sign , not by target field
Decorate almost never on the foe	same fix — 525 Coaching and 18 Decorate were mistagged as debuffs
you could Decorate a Contrary Staraptor	Mega Staraptor does have Contrary. <code>expectedBoostSign</code> already handles the inversion
Memento is an Explosion-like move	<code>userFaints</code>
Encore is sorta like choice lock	<code>locksTarget</code>
status section for the Prankster buff	<code>statusCategory</code> — 38.5% of move slots, unnamed until now
Weather Ball / Expanding Force	<code>weatherScaled</code> / <code>terrainScaled</code>
do we know what each berry resists	yes — the dex names it. 16 in play, 9.8% of items
Lum Berry?	<code>curesStatus</code> — a different class from the resist berries
Cursed Body / Toxic Debris under contact?	different triggers . Contact now derived from handler source
is "something happens when hit" enough	yes for the decision, no for the number
Reflect and Light Screen into damage calcs	they are not . 5,187 uses, zero effect on damage
no hardcodes	contact, weather/terrain setters, Intimidate, redirection and Sniper now derive from handler source. 18 name-based definitions remain, counted in the tool
Tailwind should be its own category	<code>doublesSideSpeed</code> — 6,981 uses, and it sets speed order, not damage
Aurora Veil with the screens, fails without snow	<code>halvesDamage</code> + <code>failsWithoutWeather</code>
should each major status have its own tag	yes — burn / paralysis / sleep / poison split. Each sets a different parameter
Matcha Gotcha and Flare Blitz get one too	right — status now read from secondaries , not just the primary
Toxic is different from normal poison	split. Flat 1/8 vs escalating n/16 — a different clock
Yawn inflicts drowsy	<code>delayedSleep</code> — a volatile, not a status. Forces a switch
Perish Song needs its own	<code>perishClock</code> — ignores HP, typing, items, abilities
Baneful Bunker spreads poison	I had missed it — the poison is in <code>condition.onHit</code> . Also catches Spiky Shield chip

you said	what I did
Strength Sap lowers their Attack too	declared in <code>onHit</code> , not <code>boosts</code> — now read
lowersTarget needs the stat and direction	carries it now, mirroring <code>boostsUser</code>
Taunt doesn't lock, it prevents status	<code>forbidsStatusMoves</code> — the Assault Vest restriction, applied to them
Disable is like Cursed Body but for non-attacks	both present — <code>locksTarget</code> and <code>disablesAttacker</code>
Haze clears all stat changes	<code>clearsBoosts</code> — 359 uses, and it wipes yours too
explain oneTurnGuard for Quick Guard	the parameter now names the class: Wide Guard blanks spread , Quick Guard blanks priority
shouldn't Coil get the defense and attack tags	it already did — the doc was hiding parameter values. Now shown
does the engine know what boostsUser boosts	it did not. <code>movesBoostMe</code> is only a sign, so Dragon Dance and Swords Dance read identically
Quick Claw and Bright Powder	added — <code>fractionalPriority</code> and <code>accuracyMod</code> , both derived
Sand Veil and Bright Powder	found a mistag — Sand Veil and Snow Cloak were labelled typeImmunity. They are evasion abilities
how do accuracy/evasion stages work	a different table — [1, 4/3, 5/3, 2, ...] not [1, 1.5, 2, ...]. And nothing applies them
Life Dew heals self 25% too	you asked for "or BOTH" originally and my split was exclusive. Fixed — 1,683 uses
should all the weathers have their own tag	no — what a weather does belongs to the weather, and that table is in the damage engine
we need to code in Trick too	item changes now tracked. Knock Off is 1,640 uses and the board saw none of it
Knock Off breaks Sash from damage anyway	you were right — the Sash drag needs full HP. The real cost is a stale Assault Vest or Choice Scarf
Knock Off is 1.5x on a held item — a variable move	it uses <code>onBasePower</code> , which my probe missed. That gap alone missed 4,351 appearances
almost all Whimsicott are Focus Sash	measured: 78.0% in our corpus, and the Smogon prior says 78.6%. Which argues against max-bulk as a default
what if we just assume max bulk	<code>ABRA_BULK=max</code> toggle. Measured gap is ~6% median — about one damage roll
will we leave too many kills on the table	on average no. But Whimsicott +25%, Mega Beedrill +31% — the bimodal ones
do we need all 16 rolls	yes, and it is easiest. Exactly correct, no floor() inversion edge cases, and free
is that gonna butcher calc time	no — damage is 0.03% of a self-play run. 2.18M calls/sec
we don't know EVs so these are guesses	yes — but a weighted distribution of ~6 spreads per species, narrowed by the revealed nature

The two gaps this surfaced

Screens do not affect damage. board.js derives the screen set correctly, then feeds it to one consumer — a DODUO joint feature that is switched off. Light Screen 2,346 + Reflect 1,988

- Aurora Veil 853 = **5,187 uses**, and none of them halve a single damage number.

Wide Guard exists only in the rollout engine, behind a hardcoded 35% heuristic. board.js has nothing. **2,065 uses**.

51 of 108 tags are read by nothing

tag	usage	sets
profitsFromHit	15.4%	the target gains something for being hit
weatherSetter	9.7%	weather := x on switch-in
resistBerry	9.5%	halves one super-effective hit, then is gone
contactPunish	9.0%	the ATTACKER pays for touching it
damageMultType	8.6%	x1.2 on one type
extendsScreens	3.0%	side conditions last 8 turns not 5
weatherChipImmune	2.7%	takes no sandstorm or snow residual damage
restoresStats	2.0%	undoes stat drops once
disablesAttacker	1.8%	the move I just used is removed from MY options
weatherScaled	1.4%	type, power or target changes with the weather
ignoresProtect	1.2%	Protect does NOT stop it
accuracyMod	1.2%	P(hit) scaled, often gated on a weather or a category
accuracyMod	0.8%	P(hit) is scaled, for or against the holder
pivotStatus	0.8%	no damage, an effect, then the user leaves
conditionalPower	0.7%	fixed power x a multiplier when a condition holds
chargeSkippedByWeather	0.7%	the charge turn DISAPPEARS under one weather
statusImmune	0.6%	a status cannot land
healsSelf	0.6%	restores a share of MY max HP, costing the turn
multiHit	0.5%	hits = n (or a distribution)
survivesFromFull	0.3%	a lethal hit from full HP leaves 1
ignoresDefenderAbility	0.3%	suppress every defender-side ability tag for this move
curesStatus	0.2%	a status is removed the moment it lands
preventsCrit	0.2%	$P(\text{crit}) = 0$
failsWithoutWeather	0.1%	the move does NOTHING unless a weather is up
critRatioUp	0.1%	$P(\text{crit})$ raised
boostsTarget	0.1%	positive stat stages on a BODY THAT IS NOT ME
critRatioUp	0.1%	$P(\text{crit})$ raised
perishClock	0.1%	everything on the field dies in 3 turns unless it switches
delayedSleep	0.1%	they fall asleep at the end of NEXT turn unless they switch
addsFlinch	0.1%	$P(\text{flinch}) += 10\%$ on moves that do not already flinch
clearsBoosts	0.1%	every stat stage on the field := 0, both sides

tag	usage	sets
fractionalPriority	0.1%	a CHANCE to move first inside the priority bracket
accuracyMod	0.1%	P(hit) is scaled for everyone
forcesSwitch	0.1%	the TARGET is removed from the field
critDamageUp	0.1%	the CRIT MULTIPLIER itself, not its probability
terrainScaled	0.0%	power or target changes with the terrain
alwaysCrit	0.0%	P(crit) = 1
passesState	0.0%	the incoming Pokemon INHERITS something
hazard	0.0%	their side is damaged or slowed on switch-in, until removed
critRatioUp	0.0%	P(crit) raised
ohko	0.0%	removes the target outright
fixedDamage	0.0%	damage is a constant, not a formula
terrainSetter	0.0%	terrain := x on switch-in
swapsDefences	0.0%	Def and SpD are exchanged, field-wide
suppressesItems	0.0%	held items stop working, field-wide
ignoresAbility	0.0%	the defender's ability does not apply
blocksSecondary	0.0%	added effects do not apply to the holder
preventsStatDrop	0.0%	stat drops do not apply
contactPunish	0.0%	hurts anything that makes contact
skipsChargeTurn	0.0%	the charge turn is skipped for any charge move
preventsSwitch	0.0%	the foe cannot leave

read? is a grep for the probe string — wrong in both directions. A shortlist to verify, not a verdict.

STATUS MOVES — you asked to review these

146 see real play. All of them get **Prankster +1**, are **blanked by Taunt**, and are **illegal under Assault Vest** — three interactions hanging off one property nothing had named until now.
