

ABRA — the tag master

Generated by `build/gen_tags_master.js` from `data/tags.json` and the live corpus. Do not edit this file — regenerate it. Every count is measured at generation time over the **65,976** team-sheet entries in the clean corpus.

This replaces the five separate review documents that had accumulated. There is one now.

Open question — yours to rule on

`profitsFromHit` **is doing two different jobs and should be split.**

It covers 32 abilities and 11.2% of sheet entries, and inside it are two mechanics that imply *opposite* decisions:

	what happens	compounds?	what the bot should do
Holder gets stronger	Stamina +1 Def, Justified +1 Atk, Electromorphosis gains Charge, Weak Armor +2 Spe	Yes — every hit makes the next worse	stop hitting it, or kill it this turn
Attacker gets hurt	Rough Skin chip, Static / Flame Body / Poison Point status, Gooley -1 Spe, Cursed Body disable	No — a flat toll each time	keep hitting it, just not with contact

This is your Bellibolt turn exactly. Discharge into Archaludon was resisted **and** handed it a free Stamina boost — the first row. A Rough Skin body would have been the second row and the right play would have been different. Rough Skin is 3,762 entries and Stamina 1,643, so both halves are common. Proposal:

`buffsHolderOnHit` and `punishesAttacker` , with the few that do both (Weak Armor, Gooley) carrying both.

MOVES

Every move tag with its members, ordered by how much of the format it covers.

`read` means a probe string for the tag appears in `board.js` or the damage engine. **NOT READ** means the tag is correct and nothing consumes it yet — a wiring backlog, not an error.

`statusCategory` — **153.9%, 175 moves**

category is Status: Prankster +1, blanked by Taunt, illegal under Assault Vest

Review log

What each review pass changed. Every entry names the mechanic so a later run can re-check it.

Moves review — 2026-07-28/29

Six findings, all cases where the engine could not see a mechanic at all.

1. Clanging Scales. Three separate dex fields carry self stat changes and the probes read two. `self.boosts` (Close Combat) and `secondaries[].self.boosts` (Ancient Power) were covered; `selfBoost.boosts` was not, and that is where Clanging Scales keeps its Defense drop. A 110 BP spread move with an invisible drawback. Now tagged `lowersUser`.

2. HP-gated moves. Substitute (247 uses) costs 1/4, Clangorous Soul (190) costs 1/3, Shed Tail (41) costs 1/2 — and all three *fail outright* below that. Neither cost nor failure was modelled. The failure inherits the simultaneity problem: you can have the HP when you choose and not when you act, because their attack resolves first.

3. Per-hit accuracy. Triple Axel rolls each hit separately, so it lands all three **73%** of the time, not 90%. Population Bomb lands all ten **35%**. Dual Wingbeat and Bullet Seed roll once for the whole move. Applying accuracy once overstated the multi-accuracy ones.

4. Moves that read the target's item. Knock Off is $\times 1.5$ into an item (1,663 uses) and Poltergeist fails without one (183). Mega stones do **not** dodge Poltergeist — a stone is an item and the move reads `target.item`. What stones resist is *removal*: Knock Off and Trick fail to take them, and only from the matching species. Poltergeist is near-unconditional here anyway — **106 of 65,976** sheet entries hold no item.

5. Fixed-damage moves — the worst of the set. Super Fang, Final Gambit, Endeavor, the OHKO moves and Night Shade all have base power **0** and compute damage in a callback. The engine did not misprice them, it read them as dealing **nothing at all**. 764 uses. Super Fang halves your HP and the bot thought it was harmless.

6. The placeholder rule. Anything untagged now carries an explicit `untagged` marker rather than an empty list, and is *flagged* only above 0.5% of sheets. Your call: "im not trying to plan for watchog man... just have it flag it if it becomes a problem." Every move, ability and item above that floor currently carries at least one tag.

Loose ends answered: Icicle Crash flinch is **30%**. Imprison does emit a `|-start|` volatile, which `board.js` now tracks with a turn timer. Charge is *not* like Stockpile — Charge is one-shot and consumed by the next Electric move; Stockpile stacks to 3. They share the shape of a banked resource sitting in a volatile, which is why neither was visible before volatiles were tracked.

Where this stands

	count
tags total	146
— move / ability / item	82 / 41 / 19
moves tagged	500
abilities tagged	248
items tagged	146
tags read by nothing	82
tags that match no member at all	7

82 of 146 tags are read by nothing yet. The taxonomy is ahead of the consumer, deliberately — you are reviewing before it gets wired. But that gap is the risk: this repository has a history of models fitted, saved, quoted, and never once used in a live decision. A tag that nothing reads is that same failure wearing a new hat. So the next work is not more tags. It is `tags.json` feeding the damage distribution in **MAGNEMITE**, and `tests/test-wiring.js` proving each one ran inside a real game.
